PLC Jazz Entryway Satellite Controller

MODEL: AF 976630

OVERVIEW

The PLC Jazz Satellite Controller is a control box with highly flexible programming settings used to regulate the operation of up to 10 Satellite Entryway Foam Sanitizers (or Trench Foamers) in applying rich foam to multiple entryway floors at programmed intervals, to prevent cross contamination from foot or wheeled traffic. Compressed air is used to activate and run the Satellite Entryway Foamers in accordance with a programmed schedule, without the need for electrical connections at the Satellites. Activation will start the flow of water/solution to the foamers; deactivation stops the flow of water/solution through the foamers. All foamers activate and deactivate at the same time.

Key Features

- Controls up to 10 Walk Door Satellite Entryway Foam Sanitizers
- Fully adjustable timer allows variable settings for holidays, weekly or seasonal changes in hours, and peak versus off-peak traffic demands
- All foamers activate and deactivate on the same schedule
- Designed to control any combination of Satellite units:
  - Satellite Foam (Walk Door)
  - Satellite MV Foam (Double Door)
  - Satellite HV Foam (Wide/Overhead Door)
- Works with venturi and pump fed Satellite Entryways
- Manual override on/off, without affecting the programming
- Straightforward, menu-driven programming options

Includes

- NEMA rated control box (120V)
- Multifunction timer and user-interface
- Auto / off / manual override switch
- Electric-activated air solenoid

REQUIREMENTS

Compressed Air

Electricity 120V

APPLICATIONS

- Food & Beverage
- Agriculture/Horticulture
- Animal Health
- Dairy
- Hatchery
- Industrial
- Pharm/Bio
- And Many Other Applications!

AFCO equipment & engineering
